

# Marculix' Open Access Memo

|                      |  |
|----------------------|--|
| <b>Document Type</b> | Memorandum   |
| <b>Version</b>       | 3.1(rcs)   |
| <b>Date</b>          | July 2025  |
| <b>Author</b>        | Marc Gloor (marc.gloor@u.nus.edu)  |
| <b>Purpose</b>       | Outline open access protocols for decentralized, private, and efficient data management, emphasizing open-source and privacy-focused technologies. This data sheet serves as a foundational guide for open access initiatives. Updates may follow based on technological advancements. |

## 1 Overview

This memo specifies recommended tools and protocols for secure, decentralized operations. All components prioritize open access, censorship resistance, and user sovereignty. Implementation is encouraged on Linux-based systems for optimal compatibility.

## 2 Recommendations

| Category               | Recommended Tools/Protocols   | Description   | Key Benefits   |
|------------------------|-------------------------------|---|--|
| Operating System       | Linux                         | Open-source kernel with distributions like Debian.  | Customizable, secure, free from proprietary restrictions.                  |
| Privacy                | GPG                           | Encryption for emails/files (GPG).  | End-to-end encryption  |
| Networking             | Tor                           | Enhanced w3 anonymity.  | Anonymous networking.  |
| Data Transfer          | BitTorrent, IPFS, SSH         | Peer-to-peer file sharing (BitTorrent), content-addressable storage (IPFS) and secure remote access (SSH) | Decentralized distribution, fault-tolerant storage, secure communications. |
| Data Repository        | Git (self-hosted)             | Distributed version control system, hosted on personal servers or via IPFS.                               | Full control over data, no centralized platform dependency.                |
| Finance                | PulseChain, pDAI (Stablecoin) | Layer-1 blockchain (PulseChain) with stablecoin (pDAI) for transactions.                                  | Low fees, decentralized finance, stability in value.                       |
| Decentralized Exchange | Liberty Swap on PulseChain    | Privacy-focused, intent-driven, non-custodial cross-chain exchange.                                       | Privacy, simplicity and security without exposing wallets or assets.       |

- **Compatibility:** All tools integrate seamlessly on Linux. Use Tor for overlaying privacy on transfers.
- **Best Practices:** Avoid centralized services; self-host Git repositories. Use pDAI for financial transactions in data ecosystems.
- **Security Considerations:** Regularly update GPG keys and SSH configurations. Combine with IPFS for immutable, private data storage.
- **Resources:** Refer to official documentation for each tool. For PulseChain, explore community forums for latest updates.

#### NOT GENERAL ADVICE / DO YOUR OWN RESEARCH

Please read the Disclaimer carefully before you start to use this document.
